Your Trusted Hospital for Behavioral Health & Addiction Treatment

Seven Hills Hospital offers behavioral health and chemical dependency care including inpatient acute crisis stabilization and outpatient intensive therapy for those either stepping down from inpatient hospitalization or those who need more structured outpatient treatment.

It is our goal to help each patient reach a higher level of functioning so that they can step down to a lower level of care or safely go home.

Inpatient Programs

Child & Adolescent

Inpatient mental health and substance use disorder treatment for children ages 5 to 11 and adolescents ages 12 to 17.

- While in treatment, patients benefit from services such as basic medical care, medication management and on-site detoxification.
- Each patient receives personalized care that meets their unique concerns and goals for treatment.
- Group therapy is an essential part and can involve art, yoga and wellness, life skills, journaling, recreation and more.
- Topics covered in group therapy include relapse prevention, coping skills and medication management.

Adult

Adults who need crisis intervention can get timely, compassionate care to achieve stabilization with the goal of reaching a higher level of functioning so they can step down to a lower level of care or safely return home.

- Care is provided by acuity, need and age to ensure patients receive the most appropriate care.
- Treatment therapies may include, group therapy, round-the-clock nursing, medication management, nonmedical detoxification, individual and family therapy.
- We also offer methods such as cognitive behavioral therapy (CBT), dialectical behavior therapy (DBT), motivation interview and a trauma-informed approach to treatment.

Seniors

Our *Generations Unit* is for seniors (55+) struggling with a variety of mental health concerns and substance use disorders. Our round-the-clock care is individualized to meet the unique needs of each older adult and promote the most optimal outcomes.

- Seniors have more specialized needs as they age, so our staff incorporates topics such as change of life and grief and loss therapeutics.
- Individualized treatment plans focus on their strengths and address the concerns that are unique to them.
- Program may include medication management, detoxification services, physical therapy, basic medical care, individual, group and family therapy.

Typical length of stay is five to seven days, but can vary based on individual needs.

Outpatient Programs

Partial Hospitalization Program (PHP)

This program is designed to help clients 12 years and older transition out of inpatient treatment or they can enter the program directly. PHP offers flexibility in treatment scheduling and allows clients to return home after their therapy session.

Group therapy is an essential part of PHP as it brings clients out of isolation and allows them to begin or continue healing with others who have similar experiences.

- Meets five and a half hours per day, five days per week
- Weekly psychiatric consultation for medication management
- Weekly session with registered dietician who discusses food and mood connection
- Meal and refreshments provided

Intensive Outpatient Program (IOP)

This program is ideal for clients 12 years and older who need more structured support than traditional outpatient therapy provides, but whose symptoms are not severe enough to require daily treatment.

Like with our PHP, group therapy is the main method of treatment in our IOP, as we encourage clients to develop new skills and share support with others.

- Meets three hours per day, three days per week
- You select the days
- Evening classes available
- No psychiatric consultation included in this program
- Weekly session with registered dietician who discusses food and mood connection
- Meal and refreshments provided
